## NEW Comprehensive Line of High Quality PCR Plastics

BRAND offers a collection of PCR plastics produced from pure raw material without lubricants and chemicals using the most advanced cleanroom techniques. In addition to the standard line of tubes, strips and plates, BRAND is offering NEW high quality plates with advanced features for fast, reliable and reproducible PCR results.

- **NEW!** Standard and low profile plates and tubes compatible with most thermal cyclers
- PCR plates are free from DNA, DNase, RNase and other PCR inhibitors
- Thin uniform tube wall thickness and rigid upper plate for optimal thermal transfer, short cycle times, stable product handling and consistency
- Unique blue alphanumeric coding and cut corner marking for easy identification and fast orientation
- Innovative sealing films, TPE and silicone sealing mats to drastically reduce sample evaporation.
- **NEW!** Cap tool for reliable, soft-touch sealing and detaching of PCR caps
- BRAND's PCR box/rack securely holds 96-well PCR plates, tube strips, and individual tubes for easy handling, and withstands temperatures from -80° C to +121° C
- PCR Mini Cooler helps protect samples from warming. Insulating gel maintains 4° C temperature for approximately 3 hours and changes color from violet to pink when temperature reaches 7° C.

**White PCR** products are designed specifically to optimize results when performing quantitative Real Time PCR (qPCR). White PCR strips and plates offer significantly better results in the analysis of fluorescence signals and consequently with the quantification of the replicated DNA.

- Uniformly colored with titanium dioxide (TiO<sub>2</sub>)
- Smooth surfaces to optimize reflection of the fluorescence signal
- **NEW!** Low profile, plates, and strips
