

NEW!

VACUU•CONTROL™

Remote control upgrade for ALL VACUUBRAND® systems with CVC3000 Controllers*

The new VACUU•CONTROL™ remote control enables the monitoring and control of vacuum pumping units. The innovative web-based design allows operation via computers or mobile devices such as smartphones and tablets- no need for a dedicated controller! With the new LAN (wired) or WLAN (wireless) adapters, all pumping units and vacuum systems equipped with the CVC 3000 vacuum controller or a DCP 3000 vacuum gauge† can be integrated into a computer network. VACUU•CONTROL™ makes

it possible for multiple pumping units to be controlled or monitored from a single PC, or an individual pumping unit can be observed from several devices – even across the globe, (network-dependent). The vacuum system can be operated fully and simultaneously at any time directly at the pumping unit. The built-in datalogger function automatically documents processes. Remote monitors can be automatically notified at the end of the process when a selective pressure is reached or after a set time.

- Remote monitoring and controlling of pumping units or vacuum systems with CVC 3000 or DCP 3000 through easy integration with computer networks
- Full simultaneous operation via the CVC 3000 / DCP 3000 interface or by remote control
- LAN and WLAN-adapters enables control with fixed or mobile devices
- Works with all CVC 3000 and DCP 3000 with software version 2.0 onwards (2009)
- Process documentation via integrated datalogger and notification signal at the end of the process
