

VHC^{PRO} VacuuHandControl

NEW! VHC^{PRO} VacuuHandControl for Fluid Aspiration

Safe, convenient control over your cell culture fluid aspiration. Designed for the VACUUBRAND® BVC series of fluid aspiration systems, the VHC^{PRO} also serves as a performance upgrade for other aspiration units.

- Fluid only flows through tip and tubing for leak-proof performance, and easy decontamination.
- Smooth control lever can be held in a number of comfortable positions, in the palm, like a pencil, etc., adapting to your preferred grip.
- Continuous flow setting for prolonged aspiration.
- Works with standard 200 μ L pipette tips, Pasteur pipette, and serological pipette.

The VHC^{PRO} has a number of useful accessories – all autoclavable at 121°C

8-Channel Manifold with Tip Ejector – features individual removable tip cones for easy maintenance and cleaning, as well as V-rings for low force tip mounting and ejection. Fits standard 200 μ L tips (not included). Includes multichannel stand, reagent reservoir, wrench and instructions.

Table Stand – frees up your hands for other work, while keeping tip free from contamination. Smooth surfaces allow for easy wipe down and decontamination.

Tip Ejector Attachment – allows contact-free removal of 200 μ L pipette tips to help reduce the chance of cross-contamination (pipette tips not included).
